Where/How to mount Scintillator and put modules
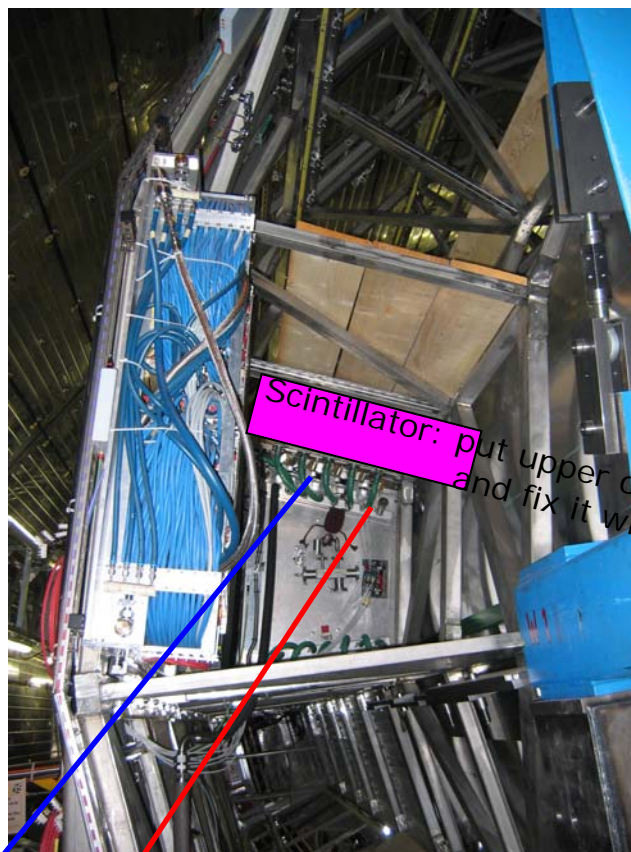

Remarks

Scintillator:
-Upper of SM is better to put scintillator on since there are wooden panel already existing, CERN people agreed on it

Modules:
- prepare wooden or plastic box(~50cmx50cmx80cm) and put NIM and Power supply modules
- when we use, put the box on floor right next to corner of A-side space frame as drawn
- When we don't use, close the box and put free space of same corridor, this way we can reduce our work on carrying

Scintillator: put upper of existing wooden panel and fix it with cable tie/tape/rope

Need long nimo cable

HV Cable length: 5~6m

Wooden box having "kind of door" in front side to operate modules

module

HV supply
